

Zhipeng Zhu

Vancouver, BC | raphael.zg8@outlook.com | +1 604.834.0061
linkedin.com/in/zhipengzhu98 | zhuzp98.github.io

SKILLS

PROGRAMMING

Python, R, SQL, Git, Shell

PLATFORM & GOVERNANCE

Databricks, Unity Catalog, Delta Lake
Vector Search, Spark / PySpark
AWS (S3), Azure Data Factory
Lakeflow, Metric Views
Hive, Doris, Medallion / ETL

AGENTS & RUNTIME

Genie Agents, Genie One, Genie Ontology
Knowledge Assistants, Databricks Apps
Lark Open Platform, OBO identity
Okta SSO, MLflow tracing

DOMAIN

Enterprise Agent architecture
Governed memory vs experiential RAG
Eval / write-back loops, HITL execution

EDUCATION

MSC, STATS / DATA SCIENCE

UNIVERSITY OF BRITISH COLUMBIA
May 2022 | Vancouver, BC
Project & Co-op Double Track

BSC, PHYSICS / MATH & STATS

OHIO STATE UNIVERSITY
May 2020 | Columbus, OH
Magna Cum Laude

CONTRIBUTION

DISTPLYR & DISTIONARY

R / PROBAVERSE

Create distribution objects (`dst_*`);
dplyr-style verbs to shift, mix, and
maximize them.

WRITING

ZHUZP98.GITHUB.IO

First-principles Agent notes (Context,
OOD silence).

Five-module enterprise Agent loop.
Databricks implementation map
(GA/Beta, phases).

EXPERIENCE

DATA SCIENTIST / AI ARCHITECT | BITMART

Feb 2025 - July 2026 | Remote

Control plane: Led warehouse→Databricks Lakehouse with Unity Catalog
governance and Okta multi-tier access.

Production Agents: Genie Agents, Knowledge Assistants, and Genie One Agents
(formerly Supervisor) live across 9 BUs. Finance on daily/weekly/monthly production
sync and runs. Ad-hoc for Genie-adopting teams: up to 2-day lag → ~1-2 hours.
Finance recurring reports: 1-2 days manual → fully automated.

Lark Bridge: Databricks→Lark Text/Files/Cards plus Sheet→UC sync; largely
replaced Superset CSV sends—100+ file jobs/day, 40+ Sheets synced.

DATA ENGINEER | BUDWEISER APAC

Jul 2024 - Dec 2024 | Shanghai

Data Engineering & Databricks: Architected middle-platform solutions, rebuilt
ODS-DW-ADS task dependencies to reduce redundancy, and optimized Databricks
cluster efficiency and Azure Data Factory ETL performance.

Data Governance & BI: Enforced multi-environment data governance frameworks.
Partnered with supply chain and sales teams to model DWS layer indicators and
preprocess data, directly supporting risk order inspections and business insights.

PROJECT

LARK × DATABRICKS GENIE BOT

Aug 2026 | Open Source (MIT)

Lark bot on Databricks Apps calling Genie as the end user (OBO) so UC grants, deep
links, and RLS follow the person. Keep-alive Jobs, UC session/token tables,
RuntimeLock. Extends the BitMart-shipped Bridge.

ENTERPRISE DATABRICKS LAKEHOUSE & MULTI-AGENT PLATFORM

Feb 2026 - July 2026 | BitMart

Medallion & multi-BU data: HDFS-Hive-Doris → S3 + Unity Catalog; DWD as
Bronze; Silver/Gold remodel; Finance models plus ERP/CRM integration (Spot,
Futures, Earn, Fiat, Growth).

Knowledge & identity: Corporate docs synced into vector KBs; Okta SSO and
multi-tier access on retrieve.

Learning loop: Specified ingest → governed memory → processing → Lark execution
→ eval/write-back—a closed Agent system, not a one-way chatbot.

HIGH-FREQUENCY LIQUIDITY & EFFECTIVE SPREAD ANALYSIS PLATFORM

July 2025 - Mar 2026 | BitMart

Quantitative Modeling: Real-time liquidity monitoring and market-impact recovery
for the Quant Liquidity desk; LOB resilience via recovery speed, spread
mean-reversion, and depth replenishment after shocks.

Data Engineering: Developed a Time-Series Alignment Engine in Databricks using
window functions and As-of Joins, seamlessly synchronizing millions of asynchronous
trade logs with 1-second and 15-minute LOB snapshots.

Business Impact: Benchmarked spot liquidity quality via Quoted/Effective Spread
calculations, successfully optimizing execution strategies and contributing to a 35%
reduction in average effective spread for core trading pairs.
